

Whitepaper

The
Unstoppable
Ecosystem

WallStreetNinja (WSN) is a complete decentralized accessibility solution, where users can access decentralized ecosystems of their choice, in a more simplistic manner, broadening accessibility and fostering mainstream adoption.

We feel the barrier to adoption is the need to install browser extensions and smartphone wallet apps. In the fast paced world of decentralized ecosystems, who has time to install an app and learn how to use it?

There are already a multitude of protocols and technologies available within the decentralized ecosystem, but largely inaccessible to the average person. Essentially we want to give people accessibility to existing infrastructure in a more user friendly fashion.

Our solution is to provide an easy to use web application that does not require browser extensions or userside web3 plugins. Instead we intend to take advantage of APIs such as Pocket Network (blockchain relays), 1inch (trading) and WalletConnect v2.

In sticking with the decentralized nature of the ecosystem, we intend to host WSN on Dfinity's Internet Computer and StackOS, which will also provide a single sign-on facility via Dfinity's Internet Identity, however the public beta will operate with an encrypted key file and password login, completely non-custodial.

More than just a web wallet, WSN will bring a whole new experience to decentralized ecosystem users, while providing existing and new projects with access to an Unstoppable Ecosystem.

Together we are Unstoppable.

USP

- ❖ There are currently no fully decentralized accessibility platforms that allow such a broad range of functionality without the need to use web3 plugins.
- ❖ Single place to access a range of networks
- ❖ Complete decentralized stack (Unstoppable)
 - * Computing
 - * Data
 - * Governance

FEATURES

DeFi

Access to your favourite DeFi protocols

NFT

Mint your own NFTs and access marketplaces

Gaming

Decentralized gaming and Metaverse applications

Meme Coins and Tokens

Collect unique Meme based crypto

...and any other decentralized technologies that are compatible with Wallet Connect

Single sign-on using Dfinity's Internet ID.

Security and safety dashboard providing transparency to smart contract approvals. Operate like a Ninja and unapprove approvals on sign off.

CORE TECHNOLOGIES

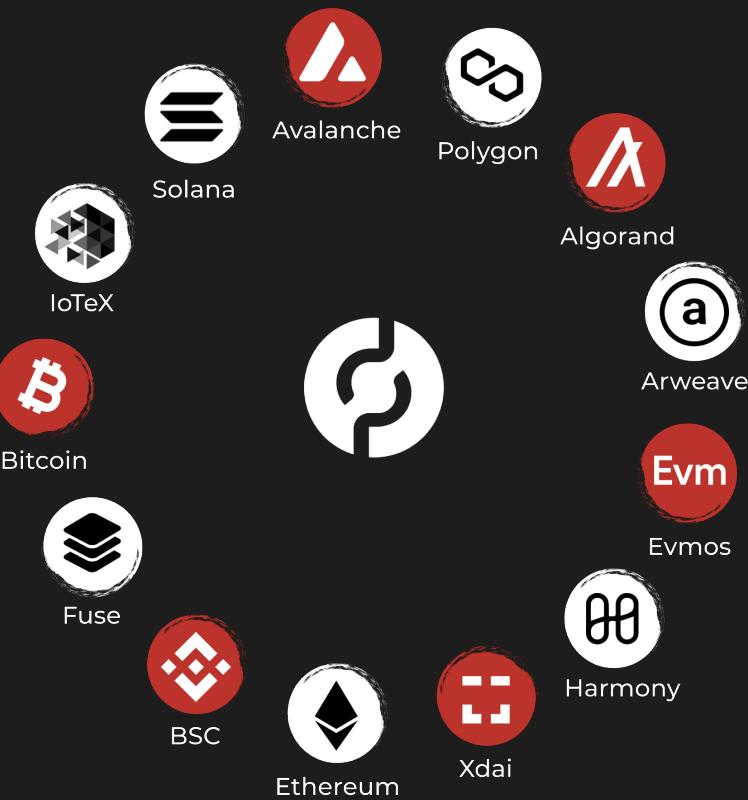

Example Integrations

- ❖ 1inch (spot trading)
- ❖ WalletConnect (multi-purpose)

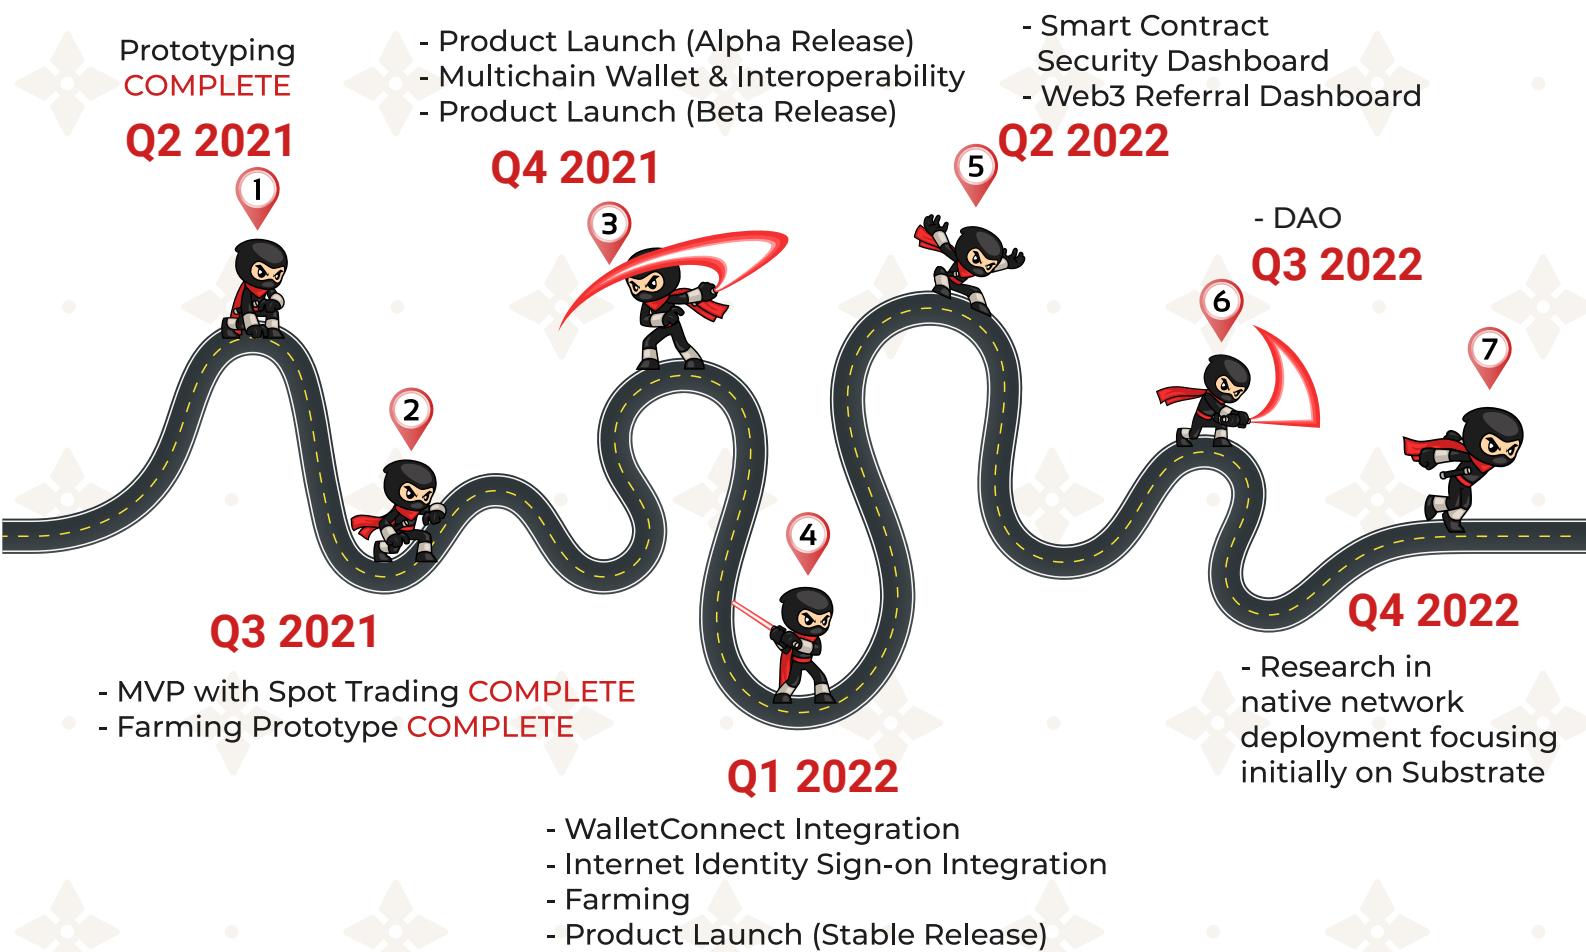

Where native APIs are not available in order to add functionality, we will build our own application specific API hosted in either an Internet Computer cannaister or StackOS docker that will interact with the Pocket API.

NETWORKS

ROADMAP

We have completed developing prototypes and an MVP.

PROGRESS

We have completed various prototyping and an MVP. Currently, preparing to launch the alpha product to the public.

TEAM

Our team is made up of a group of blockchain engineers, project managers, crypto marketers, community managers and experienced finance business operators who run as an anonymous collaboration. We are here to deliver a Decentralized Autonomous Organisation owned and governed by the token holders, known as WallStreetNinja.

In the fast paced world of decentralization, where rules and regulations differ across the globe for the sale, purchase and handling of cryptocurrencies, personalities can only get in the way of operating in a truly decentralized fashion.

The team has taken the initiative to undertake KYC via industry leader Solidproof in order to demonstrate the legitimacy of the project and team.

KYC by -  **SOLID**Proof

PROJECT INCUBATION

The project was incubated by:

Darkpool Ventures - One of the cryptosphere's most disruptive startup incubators.

Midas Touch Consulting - A market analysis firm specializing in precious metals and cryptocurrency.

REVENUE MODEL

Revenue will be generated through commissions gained via decentralized trading, which will contribute to the upkeep of the decentralized infrastructure such as Internet Computer, StackOS and Pocket Network.

TOKEN ECONIMICS

PRIMARY TOKEN USE CASE

Projects within the decentralized ecosystem will be required to make payment in \$WSN tokens for whitelisting their applications and tokens within the WSN. This is a model that was successfully pioneered by TrustWallet. The WSN tokens from these payments will subsequently be used in the various token utilities such as burning, rewards, staking and referrals.

TOKEN UTILITY

- ❖ Burning
- ❖ Rewards
- ❖ Referrals
- ❖ Participation (farming)
- ❖ Staking

DECENTRALIZED GOVERNANCE

- ❖ Proposals
- ❖ Voting
- ❖ Monetary control
- ❖ Participation rewards

TOKEN STANDARD

\$WSN Tokens are BEP-20 standard issued on the Binance Smart Chain (BSC).

SUMMARY

Given the rapid expansion of decentralized technologies, it seems logical that further adoption is inevitable, however, it requires an easy to use platform, such as the WallStreetNinja. Sign-on is made simple via Internet Identity and negates the need to use browser extensions and/or web3 plugins.

WSN remains in line with the existing decentralized ecosystem, but takes it to the next level by decentralizing computing via Internet Computer and StackOS and blockchain relays through the Pocket Network. Pocket Network integration will facilitate interoperability, giving the user access to a broad range of networks and protocols.

Furthermore, the platform's governance itself will be decentralized. WallStreetNinja will no doubt become the people's decentralized ecosystem.
